INTRODUCTION

1.1 DOCUMENT PURPOSE

The purpose of this document is to ensure that appropriate and effective measures are in place to protect, preserve and manage the confidentiality, integrity and availability of the Shire of Dandaragan's (SoD) information and it's Customer information, business processes, systems and applications.

1.2 SCOPE

This policy relates to information security of the Shire of Dandaragan's business and associated computer systems.

This document describes both reactive and proactive processes.

Reactive processes are triggered by an event or request, such as a report of a compromised host, wide spreading malicious code, software vulnerability, or an event that was identified by an intrusion detection or logging system.

The reactive processes describe information security threat response and include the responsibilities of the Security Incident Team (SIT), incident and data classification and the Incident Response Plan.

1.3 **ENVIRONMENT**

The Shire of Dandaragan Information Technology (IT) environment is diverse and complex with seven interconnected sites operating broadcast and business computer systems and activities.

The environment is predominantly a Microsoft Windows Server/Client virtual server environment built on a Cisco Local Area Network (LAN) and interconnected by a Telstra Wide Area Network and Sophos Internet gateway.

1.4 THREATS AND ASSESSMENTS

Computer systems and networks face several threats including viruses, hacks, phishing, denial of service attacks, data corruption, malicious intent from employees, extortion attempts and physical damage.

Any observable change to the normal behaviour of a system, environment, process, workflow or person may be considered a potential incident and should be immediately reported to the outsourced Managed Services provide. The Service Desk Team member must immediately escalate the potential incident to the Security Incident Team Lead. Proactive processes provide assistance and information to help prepare, protect, and secure essential systems in anticipation of attacks, problems, or events. Proactive process includes policies and procedures around information access, staff responsibilities, firewall configurations, server patches and updates etc.

SECURITY INCIDENT RESPONSE

The Security Incident Team (SIT) is the key body that manages the Shire of Dandaragan's response in the event of an information security threat or breach.

The SIT Incident Lead will be responsible for the activities of the SIT and will coordinate reviews of its actions. This might lead to changes in policies and procedures for dealing with future incidents.

SIT associate members include experts in specific areas of technology, communications, legal and senior management.

The Shire of Dandaragan SIT is as follows:

Role	Name	Title	Contact Number
Incident Lead	Brett Borthwick	Head of Technology	0499 554 455
Site Contact	Scott Clayton	Executive Manager Corporate and Community	0428 877 648

INFORMATION SECURITY POLICIES

1.5 STAFF RESPONSIBILITIES

1.5.1 PASSWORD SECURITY

Staff must keep passwords confidential at all times.

1.5.2 VIRUS EMAILS

Multiple scanning engines are deployed to scan emails and scanning is performed at the following levels.

- Office 365
- Intercept X
- User-level Sophos Antivirus

Zip files containing the following file types: .rar, .dll, .exe, .jar, .obj, .vxd, .os2, .wl6, .dos, .com or .pif will be automatically quarantined. Notification of the quarantine action will be sent to the recipient of the email who will have 7 days to request access to the file. After 7 day's the quarantined file will be permanently deleted.

Staff should remain cautious when opening any file attached to an email.

1.5.3 LAPTOP SECURITY

All devices will also be loaded with the managed services provider agent which allows for remote access and device management.

1.5.4 MOBILE PHONE AND TABLET SECURITY

All shire owned mobile devices will be loaded with VMware Workspace One mobile device management solution. This product will control the device settings including encryption, device lock times, passwords and provide policy and remote wipe features.

This will enable SoD to remove any corporate data from the devices in the event of lost devices, stolen devices or user leaving the organisation.

1.5.5 UNAUTHORISED SOFTWARE

Both Sophos Anti-Virus and Labtech (Management and Monitoring Software) will provide application install information for each workstation and mobile devices will be controlled by the mobile device management solution.

Users will not have elevated permissions to install software or applications on their devices and will require approval prior to having the software installed. Software will be installed through our Managed Services Provider with the following people authorised to approve installation:

- Scott Clayton Executive Manager of Corporate and Community Services
- Brent Bailey CEO
- David Childlow Executive Manager of Development Services
- Brad Pepper Executive Manager of Infrastructure

Or at the discretion of the Managed Service provider

1.6 COMPUTER NETWORK

1.6.1 FIREWALLS

Firewalls act as perimeter based protection and perform actions such as web content filtering, port control, spam filtering, virus protection, whitelisting/blacklisting of websites or IP addresses and malicious IP blocking to prevent denial of service, inappropriate usage, unauthorized access and malicious code.

The SoD require 24/7 uptime on Firewalls with a very narrow margin for interruption to continuous services.

1.6.1.1 Management

Centralized management of each cluster is controlled by the Sophos Firewall Manager console. Write access to this is only accessible by the Sophos Management Team at our Managed Services Provider.

1.6.1.2 Access control

Admin-Level access control to the Sophos Firewalls is managed through the Sophos Firewall Manager. Users are created in Active Directory and assigned group permissions that provide the required access level.

Write access to the firewalls is only available to the Sophos Management team which consists of the Head of Technology and Senior Engineering Team.

1.6.1.3 Logging

Firewall logs are kept for 1 month. The primary logs collected include firewall changes, system logs and HTTP Requests.

1.6.1.4 Policy control and change management.

Having an effective change control process is key to a healthy and secure firewall environment. Firewall policies are managed by the Sophos Management team at the managed service provider.

1.6.2 NETWORK INFRASTRUCTURE – LAN

Network infrastructure components are used to provide services and processes to the business. These devices consist of Core Switches and Edge Switches.

1.6.2.1 Management and Password control

Management of the LAN infrastructure is controlled by the Managed Service Provider.

Changes and logons to the LAN infrastructure are logged through tickets with the Managed Service Provider.

1.6.2.2 Firmware updates

Firmware updates are controlled by the Managed Services Provider.

1.6.3 NETWORK INFRASTRUCTURE – WIRELESS LAN

1.6.3.1 Management and Password control

User-Level access to the wireless infrastructure is accessed by four Wireless LANS (WLANS) named ShireCorp, ShireGuest, TCVC_Free_WIFI_Monitored. These WLANS each have different security levels VLANS and vary in network resource access. WLANS

ShireCorp

- WPA + WPA2 +Auth(802.1X)
- Access to one VLAN.
- Internet only
- Full access to Workstation / Server LAN

ShireGuest

- WPA + WPA2 +Auth(802.1X)
- Access to one VLAN.
- Internet only.
- No access to SoD Internal resources.

TCVC Free WIFI Monitored

- WPA + WPA2 +Auth(802.1X)
- Access to one VLAN.
- Internet only.
- No access to SoD Internal resources.

1.6.3.2 Wireless LAN controllers (WLC) (Admin-Level)

The WLC controls Wireless Access Points for all Sites. This is a cloud software based WLC and has in-built user controls.

WLC are configured for "Clean AIR" to perform detection of the following:

- Interference from devices such as Jammers, Continuous Transmitters, WiMAX etc.
- Set to trap jammers, Wi-Fi Inverted and Wi-Fi Invalid Channel
- Capture and contain ability for Rogue APs to minimize unauthorized AP's being commissioned on LAN

Management access of this device is through Https cloud based portal. Access control is provided by Managed Services Provider in a read-only capacity.

1.6.3.3 Access Point (AP)

Access Points provide access to the WLAN SSID's ShireCorp, ShireGuest & TCVC_Free_WIFI_Monitored.

- Direct remote access to AP's is disabled both for Telnet and SSH
- All controlled through Cloud based web console.

1.6.3.4 Firmware updates

Firmware updates are performed by the Managed Services Provider.

1.6.4 ANTI-VIRUS

The network is designed to prevent virus infection, malware infection and exploitation and unauthorized encryption of data maintained on owned equipment.

1.6.4.1 Staff computer systems

All computers devices connected to the network or network resources are configured to have anti-virus software installed and configured so that all virus\malware identities are up to date and are updated routinely.

The anti-virus software is configured on User-Level devices by the central cloud based Antivirus Management console.

Enforced Settings.

- Routine full scans to run twice per week.
- On access is enabled.
- Disallow Network bridging.
- Disinfect any detected viruses or malware automatically.

If a device becomes infected it may be necessary for the device to be removed from the network. This is to be determined by the Managed Service provider.

These policies are enforced by the cloud based Anti-Virus Management Console.

1.6.4.2 Servers - Admin Network

All servers on the Admin Network have Anti-Virus applied.

Enforced Settings.

- Routine full scans to run twice per week.
- On access is disabled.
- Scans are scheduled outside operational activities such as backup's time slots or peek user times.
- Manual cleanup of Virus's detected must be cleaned up by the

Technology Team.

 Automatic cleanup of virus is not enforced. Preferred instead is "Deny and Quarantine". If a device becomes infected it may be necessary for the device to be removed from the network.

These policies are enforced by the cloud based Anti-Virus Management Console.

1.6.5 MICROSOFT SECURITY PATCHING

All workstations and servers are patched through the managed Labtech solution.

1.6.6 BACKUP

All Office365 products including, but not limited to mailboxes, SharePoint, OneDrive, and Teams are backed up every 8 hours and kept indefinitely.

Local Server data is backed up twice per day to a local Datto device, with the second backup each day uploaded to the cloud and kept indefinitely.

1.6.7 REMOTE ACCESS

As a number of systems are access web based Software-as-a-Service offerings including email there is no remote access to workstations outside of the Managed Services Provider support software and remote desktop services through VPN for remote worker.

All other web based systems are accessible remotely.

To access shared file systems externally a secure SSL VPN is required.

1.6.8 DNS MANAGEMENT

Active Directory DNS is in place to provide all network devices DNS resolution. DNS replication is only to trusted Active Directory controllers. Root servers are configured to provide external Name Resolution.

Scavenging of DNS records is configured with default settings. This allows recovering and removal of duplicate stale records keeping an efficient DNS environment.

DNS servers are enforced for all end user network devices by being applied through DHCP scopes.

DNS resolution on the DMZ and Guest wireless networks is provided through the firewall devices.

1.6.9 WIDE AREA NETWORK

The Wide Area Network is a Managed Network which consists of a single layer 3 network that deliver internal network services to each site location.

All hardware associated with the Wide Area Network are accessible by the managed service who monitor and maintain the WAN with 24/7 phone support.

The core network consists of a national unencrypted Multiprotocol Label Switching (MPLS) network.

Traffic that traverses this network is:

- Network Management
- Corporate Data
- Voice

1.7 CHANGE MANAGEMENT

The SoD runs in a change management controlled environment. All changes to the environment must follow the documented process.

1.7.1 WHAT REQUIRES A CHANGE MANAGEMENT REQUEST

1.7.1.1 Definition

The Change Management Process is required when a change is being made to either the infrastructure or a critical piece of software that impacts the Shire of Dandaragan that could pose a risk to business continuity.

1.7.2 PROCESS FOR CHANGE MANAGEMENT

1.7.2.1 Raising A Change Management Request

Change Management Requests (CMRs) should be raised by either the Executive Management team or Managed Service Providers.

All changes must be documented and approved by the Shire prior to change taking place.

Changes can be requested to the Managed Services Providers in writing only.

Managed services providers are required to provide their change management process in writing.

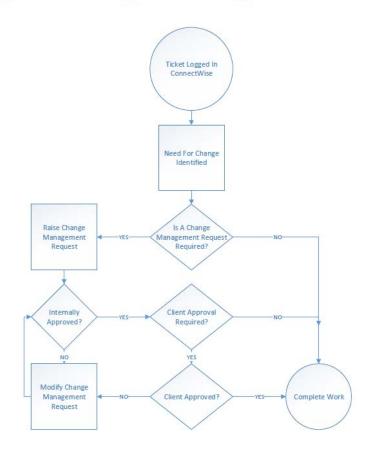

1.7.2.2 Change Management Approval

Each CMR can be approved from the following Shire staff members:

- Chief Executive Officer
- Executive Manager Corporate and Community Services

1.7.2.3 Process Flow Chart

Bridged Change Management Process

Employment Practices

Nov-20

Failure to effectively manage and lead human resources (full-time, part-time, casuals, temporary and volunteers). This includes:

-Not having appropriately qualified or experienced people in the right roles.
-Insufficient staff numbers to achieve objectives.

-Breaching employee regulations.
-Discrimination, harassment & bullying in the workplace.
-Poor employee wellbeing (causing stress).
-Key person dependencies without effective succession planning in place.
-Industrial action

Current employment practices are performing well. A number of benchmarks for this area aim to improve on national averages.

Project / Change Management

Nov-20

Inadequate analysis, design, delivery and / or status reporting of change initiatives, resulting in additional expenses, time delays or scope changes. This includes:
-Inadequate change management framework to manage and monitor change activities.
-Inadequate understanding of the impact of project change on the business.
-Failures in the transition of projects into standard operations.
-Failure to implement new systems
-Inadequate handover process
This does not include new plant & equipment purchases. Refer "Inadequate Asset Sustainability Practices"

Potential causes include;	
Lack of communication and consultation	Excessive number of projects
Lack of investment	Inadequate monitoring and review
Ineffective management of expectations (scope creep)	Project risks not managed effectively
Inadequate project planning (resources/budget)	Lack of project methodology knowledge and reporting requirements
Failures of project Vendors/Contractors	Geographic or transport difficulties sourcing equipment / materials
External consultants underquoting on costs
